

AERO Sprung Wooden Floorings

UNDERSTANDING AERO

Activities such as dance routines, yoga flows, or aerobic exercises involve repeated steps, turns, and controlled impacts. Over time, these movements interact with the floor in ways that ordinary surfaces were never designed to handle.

AERO floors address this by introducing controlled flexibility and shock absorption, allowing the surface to respond gently to movement instead of remaining completely rigid.

How AERO Floors Support Movement

Reduced stress on joints and muscles

A stable yet responsive surface for balance and turns

Consistent performance across the entire floor area

Improved comfort during longer sessions

ABOUT OUR AERO FLOORS

Spaces designed for movement deserve a surface that understands movement. Whether it's a slow yoga flow, a structured dance routine or a high-energy zumba session, every step, stretch, and transition places a demand on the floor beneath.

Comfort That Lasts Over Time

AERO floors are designed to respond to that demand with consistency, comfort and long-term reliability. It brings together natural wood aesthetics with a performance-driven sprung system, creating a surface that feels as good after years of use as it does on day one.
